	IVP 1026K	Ø25	11.8	10.2	5.00	0.43	1.0	2.6	9F	700	
Intra-arterial	IAT 0823	25 x 25	12.4	17.1	6.25	1.00	0.8	2.3	-	600	2 suture beads
Intraperitoneal	IPT 2648	25 x 25	12.4	17.1	6.25	1.05	2.6	4.8	-	500	Multiple perforations (100 mm length)

Individual Access Port available upon request

The INFU-KT is a complete implantable access system for patients who require repeated delivery of cancer chemotherapy agents, parenteral nutrition, antibiotics, blood products and for blood sampling. The injections are less painful and the implanted port allows a normal day life between infusions.

The INFU-KT port consists of a compact titanium injection port, with a self-sealing silicone septum and a silicone delivery catheter. Titanium is lighter than stainless steel and does not contain nickel. Titanium is non magnetic, which is an advantage with MRC scans. The INFU-KT kit is latex free.

It is easy to implant subcutaneously, and then easy to locate.

The easy to puncture area has been made as large as possible and can withstand 1.000 - 1.500 injections with non-coring 22 gauge Huber needles.

Each INFU-KT is supplied in a double packaged sterile (Ethylene Oxide) blister pack with:

- 1 peel-away sheath introducer
- 1 puncture needle
- 2 Huber needles (1 straight and 1 curved)
- 1 J guide wire

FB Medical offers a complete range of Huber needles: straight; curved; extension sets; and a complete range of standard venous introducers and peel-away sheaths.
